

Technology Assessment Check List

- Paper and Pen or electronic note-taking device to write down models and software versions.
- Magnifying glass, this can be either glass or electronic, to help you identify small-print model numbers
- Thick marker pen.
- Tape Measure to measure devices, such as monitor or television screen sizes. This will also help in ensuring there is space for the new equipment.

Demonstration Equipment:

- Smart phones: iPhone and Android phone
- Tablets: iPad and Nexus
- Dongles and Cables: to connect devices to larger screens if available. This will give your consumer an idea of what the device looks like on a larger screen. As a note, dongles can be used with many different devices.
- Magnifiers: One glass and one electronic. This lets the consumer evaluate the pros and cons of each.
- Braille Displays: One small, lightweight, portable, perhaps 14 cell braille display and one large, possibly 32 cell braille display. You can also present the differences between braille displays and the more advanced braille notetakers.
- Computers- It is important to show a variety of available laptops and desktops.
- Laptop
- Virtualizaiton Boot

- Dual Boot
