

(Title Slide) Using Haptic Signals to Navigate One's Environment

One woman is walking down the hallway with a white cane.

(Text box) Straight ahead

A second woman provides the signal "straight ahead" on her back. She then provides the signal for "door" to indicate the three doors they are passing.

(Text box) Door

Using Haptics, the provider informs her a person is walking towards them. The receiver immediately moves to the left to avoid colliding with the person.
